Dear Sir/Madam,

For 4 years now I have been creating interactive and simple to use web applications. My years of experience have made me competent enough for this position. This is a passion of mine and coming from a third world country I believe that I am doing my part in embracing technology.

My primary goal has been to work oversee or be part of developer's team that designs, builds, and maintains web applications, ensuring a smooth and seamless user experience. My results to date:

1. Jipange Wood and Metal Works
2. Senate Hotel Juja.
3. 24-Seven developers on some of their projects as a consultant.
4. Online Christian Dating System
5. Blood bank system as a quality assurer.
6. School Management System (ERP).

I have an insatiable need for newer and tougher challenges, I know for sure that working with you will be a thrilling and exciting opportunity for the both of us.

When can we schedule a face-to-face meeting to discuss my contribution to your growth?

Kind regards,
Kennedy W. Wafukho, Web Developer
